Levels, Differentials and Determinants of Never Attending School, School Dropout and Grade Repetition in Basic Education in Egypt, 2008. No. [278]

The study examined the levels, differentials and determinants of never attending school; school dropouts and grade repetition; to describe the demographic and socioeconomic determinants of never attending school; school dropout and grade repetition in basic education in Egypt. using the 2008 Egypt demographic and health survey data.

The study suggests selected measures and policy interventions to decrease never attending school; school dropout and grade repetition among the children of the basic education stage.

A logistic regression model was applied to identify and determine the importance and net effect of each of the socio-economic and demographic variables on child's education in terms of never attending school, dropout and grade repetition.
