

Ahmed Hassan Ismail. 2016,

Multidimensional Child Poverty in Somaliland (2011), (332)

This thesis attempts to assess and analyse the demographic and socio-economic determinants of child poverty.

The main objectives of the thesis are:

- Identify child poverty in Somaliland using multiple overlapping deprivation analyses (MODA).
- To decompose the inequality by the inequality in socio-economic.
- To assess the inequality in MODA among children by socio-economic factors.
- Decompose MODA among the children in different socio-economic factors.
- Data of the subjective child poverty Multiple Indicator Cluster Survey (MICS4), 2011.

The researcher used the Logistic Regression models for the Multivariate analysis.
