The effect of Child Mortality on Fertility in Uganda, 2011. (331)

The study aimed to investigate whether there is a positive relationship between child mortality in fertility in Uganda, 2011.

The researcher tried to analyse the role of demographic and socio-economic determinants on child mortality and fertility in Uganda, 2011.

The main data sources for this thesis are Uganda Demographic and Health Survey, 2011 (UDHS).

The researcher depends on multiple regression analysis methods.
