Factors Affecting Utilization of Maternal Health Care Services in Comoros, 2000.

The goal of the study:

- To examine the accessibility and availability of maternal health service and its impact on maternal mortality in Comoros.
- To identify the socio-demographic determinants of maternal health care services in Comoros.

The study depends on raw data of the 2000 Multiple Indicator Cluster Survey carried out in 2000.

The study also uses others sources of data such as Demographic and Health Survey of Comoros, and the 1996, 1991 and 2003 Censuses.

Both of the Statistical Packages for Social Science (SPSS) and Logistic Regression model were also used as models.
