**Socio-economic and Demographic Correlates of Unemployment in Egypt, 2010. (325)**

This study will therefore attempt to examine the characteristics and determinants of unemployment among the labor force in Egypt.

Specifically, the study achieves the following objectives:

- To analyze the level of unemployment and its variation according to demographic and socio-economic characteristics.
- To examine the characteristics of the unemployment in Egypt.
- To identify the demographic and socio-economic determinants of unemployment in Egypt.
- To review the governmental efforts for solving the unemployment problem.

The study depends mainly on raw data derived for the annual Labor Force Sample Survey (LFSS, 2011) which was carried out by the Central Agency for Public Mobilization and Statistics (CAPMAS).

The author depended on both of Logistic Regression model and Multivariate Technique.
