**Decompsing Inequities in infant mortality: social and structural factors in the Gambia, 2013. (327)**

This thesis attempts to examine the most recent levels of infant mortality rates in the Gambia, to identify the differentials of demographic, socio-economic and environmental factors affecting the levels of infant mortality rates in the Gambia.

This study used the Gambia Demographic and Health Survey, 2013

The researcher used both descriptive and analytical approaches; he depends on the Logistic Regression Model.
