The Levels and Trends of HIV/AIDS in Kyrgyz Republic During 1987-2009

This study attempts to provide basic and comprehensive information about HIV/AIDS to health care providers. The study started with tracing the recent HIV/AIDS trends of different categories of people by age-groups, sex and place of residence and identifying their social status. The study performed projection analyses for HIV/AIDS trends in the near future and described and investigated the HIV/AIDS socio-economical differentials in Kyrgyzstan. The study used both descriptive and multivariate analysis such as time series analysis and various statistical measures in the examination and presentation of the data about people infected with HIV/AIDS.
