**Factors Affecting the Nutritional Status of Children Under-Five Years in Bosnia and Herzegovina, 2006**

The main objectives of the thesis are assess basic information for the nutritional situation of children under-five years in Bosnia and Herzegovina, to identify socio-economic and demographic factors that determine and affect the status of nutrition within the country, to furnish data needed for monitoring progress toward goals established in the millennium goals as a basis for future action.

The study is based on data from BIH Multiple Indicator Cluster Survey 2006 (MICS 2006).

This study follows both descriptive and analytical approaches which in linking the nutritional status with some selected socio-economic indicators the study applies advanced techniques in analysis through logistic regression to investigate the determinants of nutritional status of Children.
