

John Mushomi Atwebembeire, 2007

Gender and Health Care Seeking Behavior in Uganda.

The study aims to examine the role of gender and the link between household socio-economic characteristics on the one hand and the decision to seek medical care or not, and if so from where. In particular, the study aims to examine the importance of gender, and the interaction between gender and age, education and household size.

The study used Uganda DHS (2000-2001), Uganda National Housing and Population Census Report (2002-2003), World Health Report and Demographic Yearbook and relevant internet resources will be used to provide up-to-date information.
