Levels, Trends and Determinants of Child Health in Ghana, 1988- 2008. (320).

The main goals of study are to assess the health of infants and children in Ghana by examining mortality, morbidity and under-nutrition.

This study attempts:

- To examine the levels and trends in infant and child mortality, child morbidity and nutritional status of children in Ghana.
- To study the differentials in infant and child mortality, child morbidity and child nutritional status by demographic and socio-economic characteristics.
- To identify the determinants of infant and child mortality, child morbidity and nutritional status in Ghana.

The main source of data is the Ghana Demographic and Health Survey, 2008 (GDHS).

The study utilizes both descriptive and multivariate analytical techniques to achieve its objectives.

The determinants of mortality a logistic regression model was used to estimate neo-natal mortality.
