Determinants of Utilization of Maternal Health Care in Mauritania, 2007.

This study investigated the Current Levels and Demographic, Socio-economic and Environmental factors influencing the Utilization of Maternal Health Care Services in Mauritania.

The study has been carried out to identify the Current Levels of Utilization of maternal health care services in Mauritania; To examine the Determinants of Utilization of maternal health care services; and to formulate Policy recommendation to address the most influencing factors.

The study is based on data obtained from Mauritanian Multiple Indicators Cluster Survey (MICS) conducted in 2007.

The Author used logistic regression model to assess the net effect of each independent variable on maternal health care services utilization; and to estimate odds ratio for these variables.
