Child Discipline in Somalia (2011). (330)

Overall, the objectives for this study are summarized in the following points:

- Identifying the current levels of child discipline for the two zones of Somaliland and punt land.
- Examining the demographic and socio-economic differentials between the zones of Somaliland and punt land.
- Identifying the determinants affecting dependent variables of demographic and socio-economic factors of child discipline for two zones of Somaliland and punt land.

Data of Somalia Multiple Indicator Cluster Survey (MICS4) were used.

The researcher depended on Logistic Regression Model to analyse the relationship between a dichotomous dependent variable and metric or dichotomous independent variables.
