Levels, Trends and Determinants of Fertility in Northern Sudan, 2000-2010.

The goal of this study is to examine the recent levels, pattern and determinants of fertility in Northern Sudan.

The study aims at:

- Examining levels and differentials of fertility in Northern Sudan.
- Investigating the determinants of fertility in Northern Sudan.

The main sources of data are (Sudanese Household Health Survey, 2010), the Safe Motherhood Survey, 2000 and The Northern Sudan Population and Housing Census, 2008.

The study used both descriptive and analytical approaches Bongaart's Model is used also to measure the impact of each of the demographic and socio-economic determinants on fertility.
