

**Mukhtar Ibrahim Batun. 2016,**

**Differentials and Determinants of Child Morbidity in Somaliland in 2011. (329)**

Several detailed and specific objectives for this study, these objectives are summarized in the following points:

- Examining the child morbidity among children aged five years and less.
- Examining the morbidity differentials among children under five according to demographic, socio-economic and environmental factors.
- Determinants of child morbidity on diarrhoea and acute respiratory infection.

The main data sources of this study are the Somaliland Multiple Indicator Cluster Survey (MICS) 2011 and 2006.

The researcher used the descriptive analysis and multivariate statistical analysis.

All regression and statistical testes were done by using stata, spss package and excel.
