**Child Mortality, Morbidity and Nutritional Status in Djibouti (2012) and Morocco (2011). (319).**

This study attempts to examine factors affecting levels, differentials in child mortality, morbidity, and nutritional status in Djibouti, Morocco and its determinants.

The major goals of this study are:

- To analyze levels and differentials of child mortality, morbidity and nutritional status in Djibouti 2012 and Morocco 2011.
- To identify the most important determinants of child mortality and morbidity in Djibouti 2012 and Morocco 2011.

This study depends basically on data of Family Health Survey (PAPFAM) which was conducted in two countries and was carried out by League of Arab States (LAS).

The author has carried out this study using both descriptive and multivariate analysis.
